# RESEARCH STUDY

## STROKE SURVEY AND FOCUS GROUP

The purpose of this research is to gather information about your experience with stroke and your current hand function. Also, you will learn about brain-computer interface (**BCI**) technology and ask questions about whether it could be a useful part of a rehabilitation program.

The study consists of a focus group meeting and questionnaires.

This is for individuals who experienced a **sub-cortical stroke** at least one year ago and who still have some hand weakness.

Individuals will be compensated \$20 for their time and be provided with free parking during their focus group visit.

Principal Investigator: **Dr. Jennifer Collinger, PhD**

Research Contact: Debbie Harrington

**Diagnosis of  
subcortical stroke**

**Stroke occurred  
over 1 year ago**

**Minimal finger  
strength**

**Must be age 18  
years or older**

**No central nervous  
system diseases  
(such as Parkinson's,  
MS, ALS, Alzheimer's,  
Huntington's, etc.)  
besides stroke**

**REHAB AND NEURAL  
ENGINEERING LABS**
